Hospitalisasi merupakan suatu krisis yang terjadi pada anak saat sakit dan dirawat di rumah sakit yang juga dialami oleh orangtua yang sangat berpengaruh pada proses perawatan dan pengobatan anak. Upaya yang dilakukan untuk mengurangi hospitalisasi tersebut melalui penerapan *Atraumatic care*. Tujuan penelitian ini adalah untuk mengetahui gambaran penerapan prinsip *atraumatic care* pada anak prasekolah yang mengalami hospitalisasi di RSUD Wangaya. Metode penelitian yang digunakan adalah penelitian deskriptif kuantitatif. Sampel penelitian berjumlah 101 orangtua anak pra sekolah yang rawat inap di RSUD Wangaya dengan teknik sampel *purposive sampling*. Data dikumpulkan dengan kuesioner dan dianalisis dengan analisis deskriptif. Hasil penelitian didapatkan penerapan prinsip *atraumatic care* pada anak prasekolah yang mengalami hospitalisasi di RSUD Wangaya sebagian besar sudah dilaksanakan dengan baik yaitu sebanyak 51 responden (50,5). *Atraumatic care* yang diterapkan dengan baik mampu mengurangi dampak trauma pada anak dan juga orangtua saat menjalani perawatan baik psikologi maupun fisik. Meningkatkan penyediaan fasilitas pendukung serta meningkatkan kemampuan komunikasi perawat dalam pemberian asuhan keperawatan pada anak.

**Kata Kunci:** Anak Pra sekolah, *Atraumatic care*, Hospitalisasi.

## **ABSTRACT**

***Description of the Application of Atraumatic Care Principles in Preschool Children Who Experienced Hospitalization at Wangaya Hospital  
Year 2025***

*Hospitalization is a crisis that occurs in children when they are sick and hospitalized which is also experienced by parents who greatly affect the process of care and treatment of children. Efforts are made to reduce hospitalization through the application of Atraumatic care. The purpose of this study was to determine the description of the application of atraumatic care principles in preschool children who experienced hospitalization at Wangaya Hospital. The research method used was quantitative descriptive research. The research sample amounted to 101 parents of pre-school children who were hospitalized at Wangaya Hospital with purposive sampling technique. Data were collected by questionnaire and analyzed by descriptive analysis. The results showed that the application of atraumatic care principles in preschool children who experienced hospitalization at Wangaya Hospital was mostly well implemented, namely 51 respondents (50.5). Atraumatic care that is well implemented is able to reduce the impact of trauma on children and parents while undergoing treatment both psychologically and physically. Improve the provision of supporting facilities and improve the communication skills of nurses in providing nursing care to children.*

**Keywords:** Pre-school children, Atraumatic care, Hospitalization.
