Procurement of goods and services is the procurement activity carried out by Ministries, Institutions, Regional Apparatus which financed by the State Budget (APBN) or Regional Budget (APBD), the process of which starts from the identifications of needs until the handover of work results. Some previous researchs has shown less effective results in the implementation of goods and services procurement through electronic catalog. The purpose of this research is to determine the percentage of procurement of goods and services for clinical laboratory through the electronic catalog at Tabanan Regional General Hospital. The type of research used is quantitative observational, was conducted at the clinical laboratory installation of Tabanan Regional General Hospital in 2025. The sample in this research is all procurement reports of clinical laboratory goods and services through the electronic catalog from January 2024 to June 2025. The average result of the evaluation showed that the percentage of procurement of clinical laboratory goods and services through the electronic catalog was 84.1%. This is influenced by several factors such as the product being freezed or not displayed in the electronic catalog, products with a minimum order quantity, and packages being canceled by the system because they exceeded the negotiation process time limit. A researcher has an opinion that the electronic catalog is more profitable because in this platform contains information such as a list or directory, types or categories, technical specifications, domestic content level, domestic products, Indonesian National Standard (SNI) products, environmentally friendly products, country of origin, price, supplier, and the other relevant informations regarding goods and services.
